SUMMARY

Third-year Software Engineering Honours student at the University of Sydney. I like working out why something breaks before fixing it. I've built and deployed full-stack and AI-powered apps using React/Next.js, Django/FastAPI, PostgreSQL, Docker and AWS. Looking for a software engineering internship in Ho Chi Minh City.

EDUCATION

University of Sydney — Sydney, Australia.
Bachelor of Engineering Honours (Software Engineering) | 2024–Present

- WAM: 77.75/100 (Distinction average) | Expected Graduation: 2028
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Development, Security Engineering

TECHNICAL SKILLS

- Languages: Python, Java, TypeScript/JavaScript, C/C++, SQL, HTML/CSS
- Frameworks: React, Next.js, FastAPI, Django, Django REST Framework
- Databases: PostgreSQL, pgvector, SQLite
- Cloud & DevOps: Docker, AWS EC2, GitHub Actions, Nginx, Vercel, Render, Linux
- Tools: Git/GitHub, pytest, JUnit, Gemini API

PROJECTS

RAG Document Assistant | GitHub | Live Demo
(Python, FastAPI, React, PostgreSQL/pgvector, Docker, AWS)

- Built and deployed a full-stack RAG application that lets users upload PDFs and receive document-grounded answers.
- Developed the FastAPI pipeline for PDF extraction, chunking, embeddings and vector search with PostgreSQL/pgvector; integrated Gemini API for answer generation.
- Built the React interface and implemented unit/integration tests with pytest, including mocked LLM calls and a separate test database.
- Deployed to AWS EC2 with Nginx and HTTPS via GitHub Actions CI/CD, and debugged CORS, mixed-content and encoding issues along the way.

JobCompass | GitHub | Live Demo | Futura Remix Hackathon 2026, extended and deployed afterwards (Next.js, TypeScript, Gemini API, Upstash Redis, PostHog, Tailwind CSS, Vitest)

- Built a visa-eligibility screener for international students: users paste a job ad and get an explainable APPLY / TAILOR / SKIP decision backed by the exact sentence from the ad.
- Designed the decision logic so Gemini only extracts evidence quotes and a deterministic rules engine makes the call, keeping every verdict explainable and testable. Claims without an exact supporting quote are dropped.
- Evaluated on a 35-ad dev set and a separate 15-ad hold-out; found the first version was overfitted to my test ads (60% on the hold-out) and rewrote extraction around clause structure instead of phrase matching. Deployed on Vercel with response caching, per-client rate limiting and a global Gemini quota guard (Upstash Redis)

YouTube Video Dubber (Chinese → Vietnamese) | GitHub | Demo clip
(Python, faster-whisper (Whisper large-v3), Gemini API (translation, TTS), ffmpeg)

- Built a pipeline that dubs Chinese videos into Vietnamese (transcribe, translate, text-to-speech, merge audio), tested end to end on a 72-second clip.
- Vietnamese speech overran its time slots by 35% on average, so I rewrote translations to a word budget based on measured TTS timings and added silence trimming and a capped speed-up, ending with 0.00s of final timeline drift across 13 blocks.
- Added caching and retry/backoff to work around Gemini free-tier quota limits.
