EDUCATION

University of Sydney **2024 – Expected 2028**

Degree: Bachelor of Engineering (Honours), Software Engineering **WAM**: 77.75/100

Scholarships: Dalyell Scholar, Vice Chancellor's International Scholarship

Coursework: Software Construction & Design, Agile Development, Data Structures & Algorithms, Systems Programming, Databases, Web Information Systems, Data and Information Management, Internet Software Platforms, Security Engineering

PROJECTS

RenoPilot - Capstone Project | *Next.js, TypeScript, Three.js, PostgreSQL* **Aug 2026 – Present**

- Built the four-option landing page by extending the shared AppLanding component without breaking the other RenoPilot apps, then added persistent light/dark themes across the quote workflow (merged, client-accepted).
- Added a 3D room preview, fixtures list and cost breakdown to customer quote reports.
- Regression-tested the Property → Map → Materials → Quote flow and Undo feature (148 passing tests), verifying cost totals across all 4 report templates and triaging defects with feature owners.
- Helped propose merging two client apps onto a lighter shared base, adopted by the client.
- Rotated as Tester/Programmer Lead, Client Liaison and Risk Analyst in a team of 8, presenting progress to the client.

TalentMatch - Internship Matching Platform | *Django, JavaScript* **Sep 2026 – Present**

- Led a team of 5; assigned tasks, ran weekly progress meetings, and established Git workflows and code-review processes.
- Built RESTful APIs and student interfaces for internship applications, saved opportunities, tracking, and match scores.
- Implemented PDF validation and access controls to secure file uploads and protect confidential internship data.
- Developed 115 unit tests with a 100% pass rate, covering application logic, API behaviour, and input validation.

JobCompass - Futura Remix Hackathon 2026 | *Next.js, TypeScript, Gemini API, Redis* **Sep 2026 – Oct 2026**

- Built a platform to assess job ads against international student visa requirements, citing direct quotations as evidence.
- Combined AI text extraction and rule-based decisions for transparent, consistent, explainable compliance assessments.
- Achieved 75% accuracy on 20 unseen job ads with zero false positives for ineligible job recommendations.
- Deployed to production with analytics, caching, and rate limiting; served 40 students and ran 41 job-ad checks in two weeks.

RAG Document Assistant | *Python, FastAPI, React, PostgreSQL, AWS* **Aug 2026 – Oct 2026**

- Built a full-stack app where users upload PDFs and ask questions, with answers drawn only from their own documents.
- Deployed on AWS EC2 with Nginx and a CI/CD pipeline for automatic releases.
- Developed 20 automated tests, with coverage for access control to prevent cross-user document access.

YouTube Video Dubber | *Python, Whisper, Gemini API, ffmpeg* **Oct 2026**

- Automated Chinese-to-Vietnamese video dubbing using speech-to-text, AI translation, and text-to-speech.
- Resolved 35% audio overrun through timing-constrained translations, achieving full sync on a 72-second test clip.
- Added caching and automatic retries to stay within free API usage limits.

SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, HTML/CSS

Frameworks: React, Next.js, FastAPI, Django, Django REST Framework, Three.js, Payload CMS

Databases: PostgreSQL, pgvector, SQLite

Cloud & DevOps: Docker, AWS EC2, Nginx, Vercel, Render

Tools: Git/GitHub, pytest, JUnit, Gemini API
