SUMMARY

Third-year Software Engineering Honours student at the University of Sydney with experience building and deploying full-stack and AI-powered applications using React/Next.js, Django/FastAPI, PostgreSQL, REST APIs, Docker, and AWS. Seeking Software Engineering internship opportunities.

EDUCATION

University of Sydney — Sydney, Australia.

Bachelor of Engineering Honours (Software Engineering) | 2024–Present

- WAM: 77.5/100 (Distinction average) | Expected Graduation: 2028
 - Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Development, Security Engineering
-

TECHNICAL SKILLS

- Languages: Python, Java, TypeScript/JavaScript, C, SQL, HTML/CSS
 - Frameworks: React, Next.js, FastAPI, Django, Django REST Framework
 - Databases: PostgreSQL, pgvector, SQLite
 - Cloud & DevOps: Docker, AWS EC2, GitHub Actions, Nginx, Vercel, Render
 - Tools: Git/GitHub, pytest, JUnit, Gemini API
-

PROJECTS

RAG Document Assistant | [GitHub](#) | [Live Demo](#)
(Python, FastAPI, React, PostgreSQL/pgvector, Docker, AWS)

- Built and deployed a full-stack RAG application that lets users upload PDFs and receive document-grounded answers.
- Developed the FastAPI pipeline for PDF extraction, chunking, embeddings and vector search with PostgreSQL/pgvector; integrated Gemini API for answer generation.
- Built the React interface and implemented unit/integration tests with pytest, including mocked LLM calls and a separate test database.
- Containerised the app with Docker, configured GitHub Actions CI/CD, and deployed it to AWS EC2 with Nginx and HTTPS; resolved CORS, mixed-content and encoding issues.

JobCompass | [GitHub](#) | [Live Demo](#) - Built during Futura Remix Hackathon 2026
(Next.js, TypeScript, Gemini API, Adzuna API, Tailwind CSS)

- Built an AI-assisted job discovery and decision-support application for international students in Australia.
- Designed a hybrid workflow where Gemini extracts grounded evidence and deterministic rules produce explainable APPLY, TAILOR, or SKIP decisions.
- Integrated the Adzuna API for personalised job discovery and added regression tests for eligibility and recommendation logic.

Expense Tracker Web Application | [GitHub](#) | [Live Demo](#)
(React, Django REST Framework, PostgreSQL, REST API, Render, Git/GitHub)

- Built and deployed a full-stack expense tracker with React, Django REST Framework, and PostgreSQL.
- Implemented authentication and user-scoped CRUD operations to ensure users can access only their own expense data.
- Developed spending analytics and REST API endpoints, deploying the frontend on Vercel and backend and PostgreSQL database on Render.
